Re: Saad/Trousdale Dr. site # 19-533
Nashville, Davidson County, Tennessee

Dear Mr. Saad:

This letter is to outline the details of the assessment conference held August 31, 1989, concerning the above referenced site. Representing the potential responsible parties (PRPs) at this conference were Ellis Saad, Kathy Saad, Richard Saad, and Jonathan Saad while the Tennessee Department of Health and Environment (the State) was represented by David Randolph and Troy Estes. The following items were agreed upon by all parties as being fair and reasonable:

- 1) A plan for the immediate removal of all liquids at the site will be prepared and submitted to the State on or before September 14, 1989.
- 2) A security fence with a large gate will be constructed around the waste area by September 20, 1989.
- 3) A remedial investigation plan addressing the levels of soil contamination, ground water contamination, and the extent of contamination both vertically and horizontally will be prepared and submitted to the State on or before October 2, 1989.

As you know, a Commissioner's Order was issued to the PRPs on July 31, 1989, mandating the PRPs to execute the items numerated above. The deadline for completion of several of these items have already passed. The State, however, has decided not to pursue enforcement proceedings providing the new deadlines are promptly met. Failure to meet these revised deadlines will result in enforcement actions by the State.
